

Yugumo Standard Housekeeping Lockers

The Yugumo Standard Housekeeping Locker is a starship interior compartment developed by the [Yugumo Corporation](#) in [YE 45](#).

History and Background

In [YE 45](#), the [Yugumo Corporation](#)'s [Yugumo Fleetworks](#) division sought to continue the standardization of its interior modules for the ships it produced. They came up with the Housekeeping Lockers to make things more convenient for the [Support Staff](#) assigned to keeping the vessels clean.

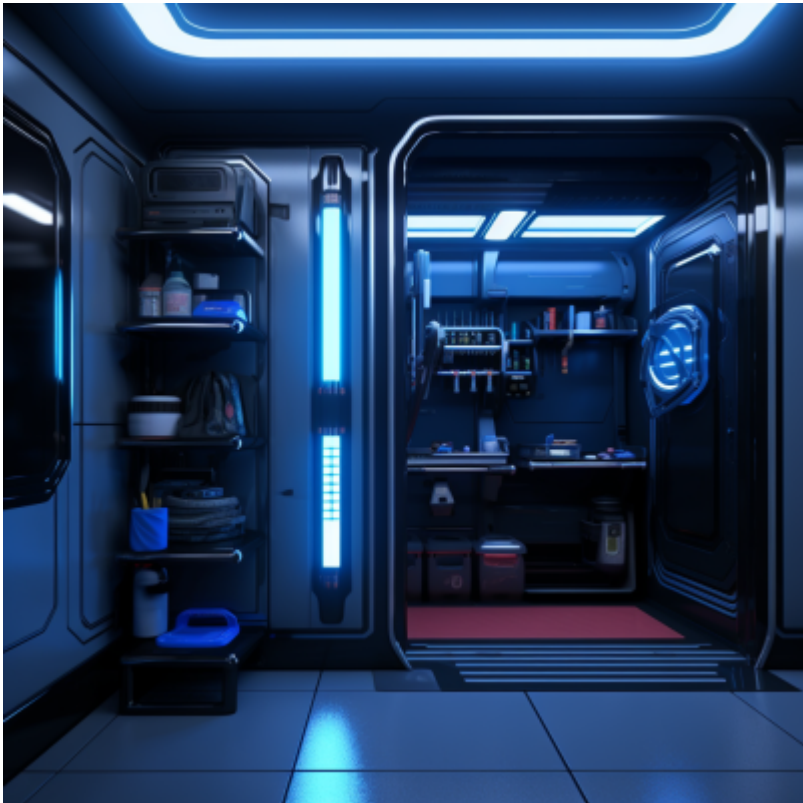

Product Information

The product information for the Yugumo Standard Housekeeping Locker.

Yugumo Standard Housekeeping Locker	
Year of Creation	YE 45
Designer	Yugumo Fleetworks
Nomenclature	Type 45
Manufacturer	Yugumo Fleetworks
Fielded by	Yugumo Corporation , Yugumo Merchant Spacy
Availability	Mass Production

Housekeeping Lockers

Yugumo Standard Housekeeping Lockers on a starship serve as storage spaces dedicated to the organization and maintenance of cleaning supplies, equipment, and tools necessary to keep the ship clean and well-maintained. These lockers are a crucial part of ensuring the health, safety, and overall functionality of the vessel. They are utilized by [Support Staff](#).

Inventory	
QTY	Item
2	Gravitational Brooms
1	Nanite-Infused Mops
1	Sonic-Wave Disinfectors
3	Guided Vacuum Drones
1	Disposal Canister
Various	Biogenic Cleaning Gels
Various	Rags and Dusters
Various	Buckets and Containers

Utility Fog

Onboard [Yugumo Fleetworks](#) ships and integrated into the [Yugumo Standard Life Support Systems](#) is the [Utility Fog](#) that can be pumped into unoccupied parts of the ship. The nanomachines in the fog are used to capture and dispose of dust and other debris to clean surfaces. These machines can also deploy [ultraviolet radiation](#) to assist with the sanitization of surfaces. However, this requires the space to be unoccupied which is sometimes difficult in key areas of the ship, so they have to be cleaned manually.

Gravitational Brooms

Gravitational brooms use a very small 🌀 [graviton](#) generator to manipulate localized gravitational fields to attract and capture debris, dust, and particles from various surfaces. They can effortlessly remove dirt and even micro-gravity debris in space environments.

Nanite-Infused Mops

These mops are infused with 🧠 [nanotechnology](#), allowing them to self-repair and adapt to different types of surfaces. They can absorb and disintegrate dirt and stains on a molecular level, leaving surfaces spotless. Any material gathered is deposited into the [Matter Collection System](#).

Sonic-Wave Disinfectors

Sonic-wave disinfectors emit high-frequency sound waves that resonate with and disrupt the cellular structures of microbes, effectively sterilizing surfaces without the need for chemical disinfectants.

Guided Vacuum Drones

Vacuum drones equipped by [KAIMON](#) can autonomously navigate and clean large areas with pinpoint accuracy. They can identify and prioritize cleaning tasks based on real-time data, ensuring thorough coverage.

Biogenic Cleaning Gels

Biogenic cleaning gels are composed of a blend of bioengineered microorganisms, enzymes, and organic compounds. These components are carefully selected and modified to enhance their cleaning efficacy while remaining safe for both the environment and personnel.

Hyper-Illuminescent Modular Light Sources

These compact light sources emit ultra-bright and adjustable illumination, making it easy to inspect and clean even the darkest corners of a spacecraft or facility.

Charging Stations

The locker includes capacitor charging stations for all the tools stored within.

Hazardous Materials Containment and Recovery

The following small  [HAZMAT](#) gear stored in Housekeeping Lockers¹⁾:

- Portable [graviton projector](#) to create graviton forcefields for containment.
- Nano-Sealed Containers
- [Yarvex](#)-lined gloves
- [Starshield Nanoflare Barrier](#)
- [Starshield AstralBlaze Foam](#)
- [RHI Type 43 "Megumi" Environmental Skinsuit](#)

OOC Notes
