A simple Reactor

The Tsuyosa Series Reactors were a basic matter-antimatter reactor.

Antimatter is produced by the [Energy Conversion](#) method from energy produced by [Kaminari Quantum Foam Generators](#) or [Aether](#) generators either on the ship, or in cases of smaller ships where matter-antimatter reactors are their primary power source, on a base or other facility. Antimatter is stored in shielded containers until it is needed.

Matter is collected by the ship's [Matter Collection System](#)
