

Medical Nanobots

Nanoscopic machines used for medical purposes, they are normally stored in vials of [Protein Shield Solution](#) for use in Hyposprays. Each vial of Nanobots is pre-programmed by a Medical Technician or Combat Medic using a [Multipurpose Palm Computer](#) before being injected into a patient's bloodstream. The Protein Shield protects each nanobot for ten hours, protecting them against the Abwehrran's immune system so they can complete their assigned task. Improved models were designed during the Second Quarter of AF 260 ([YE 32](#)).

Suggested Price: 500 Credits per Vial.

Nanobot Tasks

- Anti-Cancer: The Nanobots are programmed to attack and destroy mutated tissue.
- Anti-Toxin: Nanobots are programmed to seek out a variety of toxins (both synthetic and natural) and break them down to manageable levels.
- Internal Bleeding Recovery: A program that allows the nanobots to seek out bleeding inside the body and cauterize it, thus stopping the blood loss.
