Ke-S3-W2901 Positron Accelerator Cannons

These cannons function as deadly antimatter railguns, firing massive 2000kg compressed positron shells at near-light speeds. Each railgun fires a subspace pulse (to provide shield penetration effects) which is used to provide short-term encasement to a packet of compressed positrons (which are suspended with electromagnetic fields until leaving the cannon). The positrons annihilate electrons they come in contact with, thus destabilizing and destroying molecules, and creating a surge of energy through the target. This weapon deals extremely heavy damage against any starship. Smaller starships or starships without highend armor will likely be completely obliterated.

Anti-matter weapons should not be used in atmospheres.

• Primary Purpose: Anti-starship

Secondary Purpose: BombardmentDamage: Tier 12, Heavy Anti-Starship

• Area of Effect: Point of impact and splash area

• Range: About 804,672 km (500,000 miles)

• Rate of Fire: One burst every seven and a half seconds.

• Payload: Self regenerating.
