History

Family (or Creators)

Star Army of Yamatai

Pre-RP

After being created Yukiko went through standard basic training and then went to Ketsurui Academy, where she was trained in science and engineering. She spent there more time than others because she found out that she had an aptitude for technology and stayed for additional training. After that she was given her first assignment.

Skills

Communication

Yukiko is familiar with the basic radio operation and procedures and can make transmissions to and receive transmissions from other characters through headsets, starships, power armor, and shuttles in both combat and non-combat conditions. Yukiko is fluent in Trade and can speak and write both correctly and efficiently. She can write reports, fill forms, issue orders under fire, etc.

Fighting

Yukiko received hand-to-hand combat training, followed up with a rigorous training program. She is skilled and experienced in combat both in Yamatai-like conditions and zero-gravity, with and without weapons. Weapons she is trained in include energy pistols, knives, and power armor. Her weapons of choice are small arms, and she also likes to name her guns.

Technology Operation

Yukiko is capable of operating any computer system that uses the Kessaku OS, found on all Star Army starships. She is proficient in entering and/or searching for information. Thanks to her understanding of technology gained during her study at Ketsurui Academy she is capable of learning to operate almost all technology, which is logically built, very quickly.

Mathematics

Yukiko received advanced training in mathematics starting from basic algebra and trigonometry to dimension theory, etc. This is directly needed for her position as a scientist. She studied it during her science/engineering coursework, where advanced mathematics is must-know.

Science

At Ketsurui Academy Yukiko studied sciences and specialized in understanding matter and energy on the micro and macro scale, so her area of study included high energy physics, quantum physics, and other relevant scientific disciplines. She is finding ways how to apply theoretical knowledge of the universe to experimental and applied sciences, and she wants to use this knowledge in parallel with her engineering

skills.

Engineering

Yukikos' secondary area of study at Ketsurui Academy was engineering. She studied it so she can apply her scientific knowledge to real uses. She specializes in inventing and designing new technology. She knows how to design weapons, power plants, and other tech. She has technically innovative thinking, when she sees technology she thinks about how to improve it or tries to find out its flaws.

Construction

For Yukiko being able to build her designs, she needed training in construction. She prefers nanoconstructs, because it is the most elegant way to apply her designs. She just programs schematics into nanobots and they will build it for her. She is also able to use other methods to construct something: welding, soldering, etc. She is also working on her own way of construction using magnetic alignment and molecular binding that will be applicable for large-scale construction with metallic/magnetic materials.
