

# CSEIA Fission-Fusion Home Toaster Oven

This device utilizes the thermal energy from a thorium microreactor in order to bake, barbecue, broil, fry, grill, irradiate, poach, roast, simmer, steam, or toast just about anything imaginable. Unfortunately, its irradiation of the foodstuffs in question means it's not recommended for use by Geshrin and other species with lower radiation tolerance thresholds.

The Fission-Fusion Home Toaster Oven would eventually become infamously known as one of CSEIA's largest market flops. Several deactivated units can still be found around on the shelves of junk dealers and curiosity shops, where they stand as a testament to the fact that even cutting-edge technology can never completely make up for poor planning.
