

EM-J2-E3405 SACNES Interface

Emrys Industries

A Tamahagane Company

The EM-J2-E3405 is a security upgrade that allows the [EM-J2 Series Servitor Android](#) to access the [pantheon](#) and protect sensitive data, it became available in [YE 34](#).

Details

Manufacturer: [Tamahagane Corporation](#) Nomenclature: EM-J2 E3405 Type: Security Class: Electronic
Designer: [Tamahagane Corporation R&D](#), [Ketsurui Fleet Yards](#)

About the E3405

This option is only installed on [EM-J2's](#) that are sold to the [Star Army of Yamatai](#). It was developed by collaboration between [TC R&D](#), [KFY](#). [TC R&D](#) provided the design for the module, interface and programming. The [KFY](#) created the interior based on the [SACN Access Nodule](#).

The module serves two functions. The first is to provide the [EM-J2](#) with secured access to [pantheon](#) commensurate with the level granted to it.

The second function is to prevent the EM-J2 from storing sensitive data. When it is activated the [EM-J2](#) will not store sensitive information to the permanent memory. Non-sensitive information will still be stored.

The J2-E3405 has to be authenticated by [KFY](#) personnel before it becomes operational.

Note: It essentially causes the android to [redact](#) the permanent record it keeps.
