

Galactic Horizon 7.7x60mm Shotshell

The Galactic Horizon 7.7x60mm Shotshell is a skinnier version of the [company's](#) earlier line of [shotgun shells](#) that uses the same [Nerimium](#) 12-gauge pellets, just less of them so the weapon has less destructive potential and spread - the shell is sleek and made from a purple plastic that is highly resistant to thermal expansion and the sudden pressure changes associated with firing a projectile, with the rimless brass head¹⁾ maintaining the same nickel-plated finish as the rest of the 7.7mm line of ammunition.

Stats

A list of basic information for this particular ammunition.

- Damage Rating: Tier 2, Medium Anti-Personnel
- Size: 7.7x60mm
- Caliber: .303
- Damage Description: The heavy metal pellets hit targets at a rather staggering velocity, ripping into the target with enough force to penetrate some lighter body armour before embedding themselves in what lays beneath.
- Effective Range: 65 Meters/71 Yards
- Muzzle Velocity: 1,950 fps
- Muzzle Blast: A cone of fire escapes the barrel as burnt gasses from each successive shot are burnt off.
- Recoil: Moderately Heavy
- Energy Source: Chemical Projectile Propulsion
- Price (100 round box): 75ks/150rn/[refer to here for currency exchange](#)
