

Geshrinari Turbo Plasma Drive

[Geshrinari Shipyards](#) manufactures Plasma Drives for their designs that need high performance sub-light engines. These engines are similar in function to the [Turbo Aether Plasma Drive](#) and are powered by the primary power system. However because they are not [Aether](#) powered, they produce a lower temperature plasma that is not hazardous, and have a lower performance rating. These engines can be used in any [Geshrinari Shipyards](#) design that features aether plasma drives as replacement.

The outer ring on nozzles on the engine are [vernier thrusters](#). It is a smaller thrust motor than main attitude control motors and is used for fine adjustments to the attitude or velocity of a spacecraft.

[Geshrinari Shipyards](#) can produce them even in a modular version to fit in an [Geshrinari Modular Aether Plasma Drive](#) mounting.
