

Ge-T3-P3300 - CDD/Ion drive module

The Ge-T3-P3300 drive module was designed by [Geshrinari Shipyards](#) for their [Ge-T3-1a - Raba-Class Work-Pod](#), it became available in [YE 33](#).

The T3-P3300 is a very low powered [Geshrinari Continuum Distortion Drive](#) capable of only very low STL speeds. This comprises the forward section of the module. The other part of the drive, takes the fields and channels them into the aft to accelerate charged particles and operate as a power ion drive. This drive is used for short durations for high thrust needs.

Note: Must add fuel duration for Ion on craft.
