MFY Type 30 Auxilary Control

The MFY Type 30 Auxiliary Control Room is designed for small to moderate-sized vessels produced by Motoyoshi Fleet Yards for the Star Army of Yamatai that do not have room for a full secondary bridge. From the two stations in this room, any system on the ship can be controlled by those with the proper access. The room can be sealed by Forcefield-Nested Isolation Doors. Access to the ACS is also located in this room.

Computer System, Auxiliary (ACS)

An auxiliary backup in case the primary computer system is damaged, malfunctioning, or deactivated. When the ACS is activated, the computer systems of the TQP-RDD are rebooted in ACS mode and begin managing vital systems of the ship: Environmental, Power Systems, Propulsion, and Defensive Systems.
