About the Anti-Neutron Gun

Utilizes [Motoyoshi Fleet Yards](#)'s anti-neutron technologies relying upon their superior mass visa vie positrons and their magnetically neutral state to ensure not only a greater kinetic impact, greater released energy and also greater range – removing the natural repellent nature of positrons and antiprotons.

The gun is rather bulky, and has a limited number of shots before its anti-neutron supply requires replenishment from replaceable shielded anti-neutron containers. The shielded containers also contain the battery pack to power the weapon.

- **Purpose:** Anti-Mecha
- **[Damage Rating \(Version 3\)](#): Tier 7 Light Anti-Mecha**
- Range: 9.3 kilometers in a vacuum.
- Rate of Fire: 3 Pulses per second (Automatic).
- Payload 1 shielded container – 400 shots.
