

Jiyuu Stellar Siphon System (Retconned)

This Device is Retconned due to Wormhole Usage.

The Jiyuu Stellar Siphon System is part of the [Motoyoshi Fleet Yards](#) operated UOC Powergrid.

In orbit around [Proxima Jiyuu](#) are six [Stellar Link Siphon \(Retconned\)](#) arrays which transfer helium from the star to the [Compressed Helium Containers](#) to fuel [Pressurized Helium Reactors](#) in the [Jiyuu System](#). These arrays account for roughly forty to sixty percent of the normal energy mix for the planets in the system. During threat situations however the colonies rely on ground based systems.

The siphons also transmit fuel to civilians that are on MFY's power plans for filling of ship-based [Compressed Helium Containers](#) to fuel their [Pressurized Helium Reactors](#).

The on board production bays also construct and fill [Compressed Helium Containers](#) for pickup.

Status

Power Grid Contributions: 45-60% Current % of Operational Capacity: 44.3% (3% of that is to civilian ships on MFY power plans, 1.2% pickup service)

Retcon Notes

All technologies connected to the [Type 30 Link Siphon \(Retconned\)](#) and the [Stellar Link Siphon \(Retconned\)](#) were retconned.
