

GATEWAY Suite

The Gateway Suite is a in-network software ran by SHRINE-OS for the [MIKO Electronics Suite](#). Gateway acts as a bridge between MIKO Cores within the network allowing them to function in tandem to facilitate logistical functions. It aides logistical officers in managing inventories, schedules and logistic operations. While all MIKO Cores run the suite, the master software is installed on capital ships and logistical hubs.

GATEWAY-M

GATEWAY-M is the master logistics control software, it is installed on logistics vessels, shipyards, bases and capital ships. Since all cargo is cataloged and tracked GATEWAY-M can manage things like ensuring consumables are replenished before they run out, the arrangement of transport for personal items and personnel during personnel transfers, the routes and orders of logistics vessels, requests and inventory orders from vessels in the fleet, etc.

GATEWAY-L

GATEWAY-L is the lite version of GATEWAY installed on all starship-based MIKO systems. It aids logistical personnel in managing inventories and schedules, ordering and personnel management by connection to GATEWAY-M.

GATEWAY-E

GATEWAY-E is the version of GATEWAY for use on merchant ships, it handles inventory, corporate ordering, stock quotes, and advertising functions.
