

# Yumeoibito Hyperspace Fold Drive

A reliable Hyperspace Fold Drive created by [Motoyoshi Fleet Yards](#) in [YE 30](#), that continues to be used in the products of [Yugumo Corporation](#) in [YE 42](#).

## About the Yumeoibito Hyperspace Fold Drive

The *Yumeoibito Hyperspace Fold Drive* is a form of propulsion that pushes a vessel into a dimension, called [Hyperspace Travel](#), that is adjacent to our own dimension but where distances are far smaller. The Yumeoibito design is built on redundancy; it is actually two smaller hyperspace fold drive modules with built-in capacitor systems. The capacitors keep the modules charged so that when one module is used the second will remain charged so the vessel can make a second transit into hyperspace.

The technology for the drives was so reliable that even though it was developed in [YE 30](#) by [Motoyoshi Fleet Yards](#), it continues to be built and deployed in ships produced by the [Yugumo Corporation](#) in [YE 42](#).

In [Yamataigo](#) Yumeoibito means Dream Chaser.

## A Scalable and Modular Design

Like most components and systems deployed in [Yugumo Corporation](#) designs, the Yumeoibito Hyperspace Fold Drive is built using a scalable and modular design so the units are able to be produced for a range of product vessels and use common parts that are easy to replace and repair.
