Jamming 'Squealers' Warheads

A specialized Electronic Warfare Warhead, it carries specialized equipment designed to interfere with anti-missile tracking systems and gravatronic radar. To be at its peak efficiency, Abwehran Commanders usually launch 'Squealers' and Dummy Warheads in conjunction with Combat Warheads in the first wave of missiles (3/4 decoys and 1/4 combat) and then slowly increasing the amount of combat warheads from there.

Damage Capacity

See *Damage Rating (Version 3)* for an explanation of the damage system.

Effective Damage Rating: 0

Models

- "Firebrand" Squealers - Used to disrupt infrared targeting systems, the Firebrand generates temperatures much hotter than a Fusion heat signature upon command. When Tactical Officers suddenly switch the Firebrand on, anything that is heat seeking tends to divert away from missiles they are targeting.

- "White Noise" Squealers - Used to disrupt electromagnetic targeting systems, the White Noise generates a high frequency radio burst to constantly hassle anti-missile targeting systems and fire control.

- "Black Hole" Squealers - Using a graviton pulsing device much like a charged burst from an Abwehran Civilian Gravatronic Radar, the Black Hole is used to disrupt gravimetric targeting systems consistently.
