

Quantum Effect Generator

The QEG was developed for use in future Azorean Ships, it became available in [YE 36](#).

About the QEG

Interwoven, micron thin plates (non-magnetically and Non-electrically charged) separated by less than a micron in a vacuum sealed chamber, allowing quantum charges to cause a potential difference. The power created in such difference is then jaunted out to connections to the ships systems.

With a single main output for a standard unit, a ship requires multipliable units in play along with power distribution junctions, to divide the power to the many systems that a ship would need power for. Dedicated units would be used for a single FTL drive.

Dimensions

- Width: 2m (78 in)
- Height: 2m (78 in)
- Depth: 2m (78 in)

Details

Manufacturer: Azorean Milatary Type: Cashmir Foam Class: Generator Designer: [Nevah](#) Project

Specifications

In appearance, this Power core would look like a big matte black box; but on closer examination it would be like floating cards shuffled together in a three dimensional array. The basic dimensions are two meters cubed. Though the math proves the energy dimensions of the shape is truly more of an hypercube in shape.

OOC

Special thanks to BionicSamurai, he walked be though the brain hurting world of science to make this, he also helped me write the descriptions of the hows and whys.
