

Stako Yanuto (Exo-Skel)

Stako Yanuto (*Exo-Skel*) are 🤖 [mecha](#) that have been used by the [Poku Saeruo Degonjo](#) long before they came to this sector.

Origin

The origin of the Exo-skel predates the [Norka \(The Exodus\)](#). Designed originally as a means of assisting [Poku'vonai](#) in performing hazardous construction and cargo work. It was not long after the first successful model was created, that the concept was explored by the military and armed versions were developed.

History

This section provides a brief history and status of each class of mecha

Ultra

Before the [Norka \(The Exodus\)](#) *Wuny-me Stako* or cargo skeleton was common place. This model was the only one that used [Gianaka Gean \(Fuel Cells\)](#). This was satisfactory since the fuel modules could be easily exchanged on site. While many of the Ultra or ultra-light class were brought with the clan, over the years their tasks were picked up by Light class. This was an effort to conserve resources.

In light of the movement to colonize worlds, this series may see a re-emergence.

Light

The light class of Stako was the first enclosed one developed, and was the first 'military' version. It was soon a staple on most ships. When other larger frames were developed it was re-purposed for recon and survey. After the [Norka](#) it took over the role of the Ultra since most construction efforts were being conducted in vacuum. Many of the original ones that survived the journey were actually salvaged and their parts used to build new lights.

Over the years, this Stako remained the workhorse for the clan. With the clan moving out from the shadows, the need for more larger Stako has been seen. So the [Goa'ismâ \(Scout\) Stako Yanuto](#) has undergone yet another iteration to carry it forward.

Medium

The original medium Stako was constructed for the purpose of operating alone and often behind enemy lines. It remained in use throughout the years, but in relatively small numbers. The model is equipped with heavier armor and sufficient weapons to deal with most threats. It also was capable of mounting a stealth system.

Production of the latest version is expected to increase as the clan moves to new worlds and a standing fighting force is required.

Heavy

While the clan brought number of the Heavy class, they with the change in paradigm of the clan when they arrived in the sector, they were slowed phased out as their systems became obsolete and their role was not required. The last of the original Heavies were retired in 229 CY (YE -490).

In 752 CY (YE 33) interest in combat mecha returned and design and development began.

Types

The Clan currently has three models of Stako Yanuto:

Class	Name	Purpose	Status
Ultra	Wuny-me Stako	Cargo/Construction	None
Light	Goa'ismâ (Scout) Stako Yanuto	Survey / Recon	Common
Medium	Hata'egon (Stalker)	Covert Ops	Rare
Heavy	Matu'dahoka (Battle Bear) Stako Yanuto	Combat	In Service

Specifications

- Running
- Leaping
- Increased Strength
- Communications
- Life Support

Options

- Zero-G Maneuver Rig - small thrusters for orientation and minor movement in 0 G
- Atmospheric Movement Rig - VTOL Short Duration Flight
- Space Movement Rig - Large boosters for faster movement in space
- Arm utility module
- Integrated Weaponry

Size Comparison

Unique Facets

This page lists some of the unique or identifying features of the Stako Yanuto.

Heads

Each of the models have a different head design.

Cultural

- [Stako Saal \(Tiny Skel\)](#)
