

# Ano (Wall)

Interior Anoi or walls on [Poku Saeruo Degonjo](#) ships are constructed of [Mâqitua \(Light Metal\)](#) and are 3.2cm (8in) thick. They have integrated conduits for routing wiring and plumbing where necessary. The thickness is to allow for the equipment necessary for [Anomu Wunyte \(Security Door\)](#).

Ano are typically prefabricated which makes construction easier, and repairs just as easy. This allows repairs to be made easily and quickly. There are a number of panels that can be removed at the edges which give access to the bolts that hold them in place to the frame so maintenance personnel can remove them when required.
