

Tinvyma Piatypedra (Wave Rider Drive)

The Tinvyma Piatypedra is the [Poku Saeruo Degonjo](#) version of [Continuum Distortion Drive](#), it became acceptable for use on clan vessels in 754 CY ([YE 35](#)).

About the Piaty Pedamovi

The Tinvyma Piatypedra was put into production to allow clan vessels to operate with allied vessels in a compatible manner.

History

The Clan first encountered [Continuum Distortion Drive](#) technology in 740 CY ([YE 21](#)) while salvaging [Yamataian](#) debris. Initial tests with the alien made equipment were made on a clan ship that was used as a test bed. After studying the technology, the test ship was put into storage and the technology filed.

It was not until after the [YE 35 HSC - YSE Treaty](#) that work began on a Clan developed version of the drive. Once the prototype was tested it became available for use on clan ships that were constructed, or retrofitted with the new drive. The first new ship design to include this engine was the [HS-SC2-1a Yome Daho'ka \(Battle Hawk\) Class Ship](#).

Tinvyma Piatypedra Performance

Ship Size	Speed	Usage
0 - Shuttle	5,000c (~0.57 ly/h)	None
1 - Compact Starship	10,000c (1.15 ly/h)	None
2 - Small starship	17,500c (1.9 ly/h)	None
3 - Medium starship	12,500c (~1.43 ly/h)	None
4 - Large starship	12,500c (~1.43 ly/h)	None
S - Huge starship	3,652.5c (10 ly/d)	None

Signature

The [Poku Saeruo Degonjo](#) tunes their Tinvyma Piatypedo to a unique energy signature compared to those in use by known factions.

Due to the legacy of stealth in the mindset of the clan, military version Tinvyma Piatypedo can often be tuned to match the signature of known factions.
