

Heim Force Generator

The *Poku Saeruo Degonjo* use applications of  Heim Theory quantum gravity force to create and control gravity. It is a fundamental component of the *Poku Saeruo Degonjo* technology.

Gravity Generators

Basically photons, under the influence of a strong magnetic field in a certain configuration, are transformed into 'gravito-photons', which would provide an artificial gravity force. These units consist of rings and clusters of emitters with control and sensor modules.

This is the basic technology behind their artificial gravity aboard their ships and other structures. They can vary the strength of the gravity and control the direction of the pull.

Anti-Gravity Generators

The *Poku'vonai* by further altering the magnetic field configuration, they developed the means to produce 'anti-gravito-photons' which allow them to create and control anti-gravity fields. These units consist of rings and clusters of emitters with control and sensor modules.

This is the basic technology behind their anti-gravity used in their engines, deflectors, and anti-grav vehicles.
