

Gean Vymasa (Ion Thruster)

The [Poku Saeruo Degonjo](#) have used Gean Vymasa or [ion thrusters](#) for all their low thrust requirements. Typically used for attitude control of vessels, docking maneuvers, and position/attitude control for stations.

These thrusters use [xenon](#) gas as their propellant. Each thruster has a small fuel container attached for its operation. The container is connected to the main reservoir of [xenon](#) for refilling purposes.
