

Tua Mâqisumanâ (Light Forge)

The Tua Mâqisumanâ *light forge* is used to produce [Mâqitua \(Light Metal\)](#) material for the [Poku Saeruo Degonjo](#). It is a technology they had prior to the [Norka \(The Exodus\)](#).

The forge uses a combination of heat and pressure to produce various forms of [Mâqitua \(Light Metal\)](#) material. These forges are present on the [Poku Movi Vamâqi \(Clan Void Berth\)](#), the [Sotâka Ruomâqi \(World Station\)](#) and any other facility that manufactures stuff.

Raw material is placed into a hopper and mixed. It is then poured into the forge. The chamber is closed and is heated by lasers to the necessary temperature. The forge then applies pressure to the mixture with pneumatic presses.

Once the material has reached the desired state it can then be poured into molds, extruded in beams, rolled into sheets, or spun into thin filaments. Once shaped the material is allowed to cool.
