

# Nomad Servo Arm

The NAM utility servo arm is a utility [hardpoint](#) for the [NAM Terratech Multi-Role Cavalry Armor-"Nomad"](#) back hardpoint that adds a strong and capable extra arm for utility and engineering purposes.

## Usage

The servo arm is a long, thin arm ending in three needle-nose-style pinching arms. It assists in the manipulation of objects without needing to dedicate the suit wearers arms that may otherwise be dedicated to weaponry or other tasks.

The servo is connected to a powerful motor and drive system that draw power from the suit and can offer increased leverage and manipulation ability as it provides more strength than the default arms of the Nomad power armor while being delicate enough to move and manipulate small and fragile options.

Beyond increasing the reach and manipulation ability of the armor a Servo can perform intricate tasks and in a skilled pilots hands can act as a dedicated *third arm* and perform tasks such as reloading weapons without using both hands, throw grenades, or even act as a dedicated melee weapon due to the strength and pointed-tips of the arms.

The Servo arm is attached to the *back* hardpoint and reserves one of its slots. Two-total can be installed on a Nomad.
