

Neshaten Medium Sized Engineering Bay

Found on medium sized vessels, and used as a backup on stations and larger ships, the [Neshaten Medium Sized Engineering Bay](#) is the power center of any stations or vessel.

The bay is three stories tall, with ladder that permit crew access to each floor and walkways to allow them to work on ship or station systems. The bay also has two [Lunebaren Reactors](#)'s and can have up to six fusion reactors for backup power.

There are four control terminals on the ground floor and one on the top floor, all five are configurable. The bay operates in zero-g, due to the reactor requiring it.

If used as a backup, the bay won't have any FTL component inside, however, if it is main bay, then it will.
