

A48C1 Nero'cro

The A48C1 Nero'cro is an armor piercing cartridge designed for use against armored and unarmed targets. It is manufactured by [S.A.M.](#). The bullet came about when the Neshaten were designing the [Juvo'tron Sniper Rifle](#), the bullet was created in ER 512 and is still in production.

The A48C1 is designed to be loaded into magazines. It is strictly a rifle round.

Stats

- Damage Rating: Tier 2, Medium Anti-Personnel
- Caliber: .50 Cartridge
- Damage Description:
- Effective Range: 9,200 meters
- Price: 120 Rn for a magazine of ten
- Muzzle Velocity: 3,920 m/s
- Muzzle Blast: Small, Light red
- Recoil: Light - medium
- Energy Source: Chemical

Ammunition Types

Only one ammo type exists at this time.

Armor Piercing

The AP round of the A48C1, designed to punch through armored targets. It was invented quite by accident during the initial designing of the Juvo'tron Sniper Rifle, it's designer was a young Daur by the name Lux'trious who was experimenting with various materials to create a cartridge that could go through the armor plating that they had currently, it took the designer many days to get the design down and many more to find the right explosive solution to use.

In the end, he created a cartridge that was low-cost, but had a high damage value and force behind it.

Material

The round is made out of an advanced alloy designed by the Neshaten originally for use in steel construction, but later adapted for use in smaller items such as bullets.

Performance

The A49C1 works in similiar fashion to the [12.7×99mm NATO](#)
