

Taurus Anti Tank Cannon

An anti-tank cannon module designed for use by the [My'leke](#), usable only with the [My'leke Universal Module](#). The module was created in ER 550 and put into use in ER 566.

About

The Taurus was created for use against armored or hardened targets. It's not designed to hit fast movers.

History

Created in ER 550, the Taurus is one of several weaponized based modules created by inventor Joh'tre'na Tau'rus, a My'leke Seeker. Originally, the modules weapon was intended to be used purely as a deterrent against terrorists and criminals wanting to use armored vehicles for committing crimes. However, this changed as the weapon went through various modifications over the span of nearly three hundred years.

Stats

Class: Weapon System Nomenclature: [Ne-M1-WER566](#) Designers: Joh'tre'na Tau'rus Manufacturer: Shukara Armaments Users of this product: [Kingdom of Neshaten](#), [Shukara Volunteer Navy](#)

Appearance

The module looks slightly boxy with the slides slopping down to cover some of the modules internal parts. A two foot long barrel extends out from one of the two forward sides of the weapon, it's location dependant on the My'leke operating the module. Because of the barrels long length, there are a series of load bearers located rear to keep the My'leke from tipping forward.

There are heat-sinks located along the sides to filter the heat out into the air and away from the user.

Systems

A list of systems within this module.

Power Transfer System

Because the module lacks its own generator, it is given power from the MUWM's power generator. The

PTS facilitates this process by serving as a conduit for power.

Capacitors

There is a single onboard capacitor that can store up to one hour's worth of extra power. This power is used when the cannon is fired, it takes up to twenty minutes for the capacitor to fully recharge.

MUWM Connectors

Located on the bottom of the module and largely kept out of sight as eight connectors that connect into the top part of the MUWM, this allows the My'leke to control this module using the control systems of the MUWM.

Main Cannon

The part weapon of the module is the two foot long cannon, the weapon fires superheated plasma.

- Purpose: Anti-Armor
- Damage: Tier 4, Light Anti-Armor
- Range: roughly 1.8 KM's
- Rate of Fire (Pulse): One shot five second.
- Payload Onboard capacitor allows for up to ten shots before needing to recharge.

Targetting Systems

Situated at the front of the cannon is the modules targetting system, which tells the wielder what direction the cannon is presently facing along with providing the distance to the target.
