Year Created:	YE 45
Designer / Manufacturer:	Advancer Enterprises
Nomenclature:	AE-N23
Price:	12 KS per 50mg tablet

History

Baipiline was developed as part of Advancer Enterprises' commitment to addressing unmet medical needs. Recognizing the limitations of existing analgesics on the market, the company invested in research and development to create a drug that could manage more severe forms of pain without compromising safety. After rigorous clinical trials, Baipiline was approved for medical use and has since become a go-to option for healthcare providers dealing with complex pain management cases.

Usage

Baipiline acts centrally on the nervous system, targeting specific receptors involved in pain perception. Its potency makes it a preferred choice for post-surgical pain, severe injuries, and chronic conditions like cancer or debilitating arthritis. The drug is available in 50mg tablets, and the dosage is tailored to individual needs, usually not exceeding 200mg per day. Due to its potency, it is a prescription-only medication and should be used under strict medical supervision.

Side Effects

Like all potent analgesics, Baipiline can have significant side effects. These may include drowsiness, dizziness, nausea, and constipation. The drug can also lead to physical dependence and, when misused, can result in addiction. For this reason, it is crucial that usage is carefully monitored by a healthcare professional. Similar to other drugs in its class, Baipiline is not effective when inhaled.

Overdose

Overdosing on Baipiline is a serious medical emergency that can lead to respiratory depression, hypotension, and even coma. The overdose threshold is estimated to be around 250mg to 350mg. Immediate medical intervention is essential, often involving the administration of opioid antagonists like

naloxone to counteract the drug's effects.
