Year Created:	<a href="#">YE 45</a>
Designer / Manufacturer:	<a href="#">Advancer Enterprises</a>
Nomenclature:	AE-N24
Price:	15 KS per 100mg vial

## History

Ruomiline was conceived as a response to expand existing pain management options. Advancer Enterprises, ever committed to pushing the boundaries of medical science, invested heavily in R&D to create a drug that could tackle severe pain without compromising patient safety. Following rigorous clinical trials and ethical reviews, Ruomiline was approved for medical use, quickly becoming a cornerstone in the treatment of severe pain in hospital settings.

## Usage

Ruomiline operates by inhibiting the transmission of pain signals to the brain, effectively reducing the perception of severe pain. Due to its potency, it is primarily administered in controlled hospital environments where its effects can be closely monitored. The drug is available in 100mg vials for intravenous administration, and dosages are tailored to individual patient needs, often not exceeding 300mg per day.

## Side Effects

Ruomiline, while revolutionary in its efficacy, comes with a set of significant side effects that necessitate vigilant monitoring. Common side effects include drowsiness, confusion, and gastrointestinal issues such as constipation. More critically, the drug has a high potential for physical dependence and addiction. Therefore, its use is strictly regulated and overseen by healthcare professionals to mitigate these risks.

## Overdose

An overdose of Ruomiline is a life-threatening emergency that can result in severe respiratory depression, hypotension, and even death. The overdose threshold is estimated to be around 200mg to

400mg. Immediate medical intervention is crucial, often involving the administration of opioid antagonists like naloxone to counteract the drug's effects.
