| Nomenclature:            | AE-N20                               |
| Price:                   | 200 KS per 50mg/100ml saline bag     |

## History

Voaxiesanar was developed to address the urgent need for fast-acting, effective treatments for life-threatening cardiac conditions. The project was initiated by Advancer's Advanced Medical Division, which collaborated with the Mechanics Division to integrate cutting-edge medical machinery into the drug's testing process. The drug underwent rigorous clinical trials, with its formulation being repeatedly refined to maximize efficacy and minimize side effects. It was finally approved for emergency use in [YE 45](#), embodying Advancer's commitment to innovation, customer service, and the sanctity of human life.

## Usage

Voaxiesanar is administered intravenously in emergency situations, given its rapid onset of action. The standard dosage is 50mg, diluted in 100ml of saline solution. It acts by modulating the electrical activity of the heart, thereby normalizing cardiac rhythm. This is crucial in cases of cardiac arrest or severe dysrhythmia, where every second can be the difference between life and death. By stabilizing the heart's rhythm, Voaxiesanar not only prevents further cardiac damage but also protects other vital organs from hypoxia.

## Side Effects

As a potent cardiac medication, Voaxiesanar is associated with a range of side effects. Common ones include transient palpitations, nervousness, and a rapid heartbeat. In rare cases, it can cause more serious side effects such as chest pain, shortness of breath, or an irregular heartbeat. Due to these potential side effects, Voaxiesanar should only be administered under the supervision of a healthcare professional. It is not intended for long-term use or self-medication.

# Overdose

An overdose of Voaxiesanar is a critical medical emergency. The overdose threshold is 200mg, four times the recommended dose. Overdosing can lead to severe cardiac arrhythmias and even cardiac arrest. Immediate medical intervention is essential, often requiring electrical cardioversion to restore normal heart rhythm. The drug's potency makes it imperative that it is administered carefully, under strict medical supervision.
