

# Kumiko's Customized Gear

All of [Kumiko's](#) specialized gear is listed here, as distinct from all of her normal inventory.

## Godfrey & Morrison Wizard's "Circe" Outfit

[Godfrey & Morrison Wizard's "Circe" Outfit](#) **Value:** 1150 KS

## Godfrey & Morrison Wizard's "Circe" Outfit

[Godfrey & Morrison Captain's "Hero" Outfit](#) **Value:** 650 KS

## Kumiko's shooting gloves

- Type: Ballistic Mesh gloves
- Role: Protection and aesthetics
- Mass: 1.5lbs

**Description:** Soft grey range gloves, made of tightly woven (yet breathable) Ballistic mesh, meant to help protect the hands of the wearer from the abuse of extended fire with guns. With light meshing between the fingers (not between the index and thumb) to improve the temperature transfer on the hands, the wrist of the gloves is also made of a loosely tensioned elastic to prevent the gloves from shifting while in use. The back of the hand on each glove has an intricate embroidered crest upon it, showing a hawk holding a pair of olive branches.

**Value:** 290 KS

## Kumiko's Helmet

- Type: Composite Hazard Helmet
- Role: Combat and Hazard protection
- Mass: 8lbs

**Description:** Kumiko's helmet, designed on her own money for her own preferences, is a mottled dark gray, of a pattern that lends itself well to concealment. The outer shell of the helmet is made of a super-dense composite material with a beam dispersive coating, with the inside being a combination of SynAraS and other exotic fibers for comfort. Designed purposefully to wick sweat away from her face and head, and to maintain a cool, even temperature, the system is designed to power all of its own internal components purely out of its own power sources, with self-repairing nanites to maintain the systems. With an internal comms system, a wireless hacking probe, a rangefinder, sonic filter, light filter/UV filtration system, thermoptic camo, and an external sensor network, its power needs are high, using a

doubled battery system that lasts about 8 hours per pair of batteries. Though an expensive piece of equipment, it's wide range of usage makes it worthwhile for her.

**Value:** 2320 KS

### **Kumiko's Bodyarmor**

- Type: Heavy Hazard suit
- Role: Heavy combat protection, hazardous conditions
- Mass: 28.8lbs

**Description:** Kumiko commissioned a full set of body armor for herself, designed to tie into her helmet through a balaclava style cover, with an airtight seal. Made of the lightweight composite Duramite on the outside, the internals are heavily lined with SynAraS and other lightweight materials, designed to wick moisture away from the body, with a middle layer of anti-kinetic padding, just in case. Both grounded and insulated, and including a beam dispersive coating, the outer shell of the armor can stand a huge amount of punishment before its integrity is compromised. its systems include a trio of microboosters at the small of the back, a machine interface, mechanical servos, fine-tuned for Kumiko personally, a high-end set of sensor bafflers, thermoptic camo, and a pair of quick release holsters on either hip. It's suitable for nearly any situation she could need it in, and is sturdy enough to survive those situations, with some system repair nanites making what repairs they can, even in the field.

**Price:** 4790KS
