

Saiki Nebula

This is the region twenty light years north of [SX-05](#). This area is known for its dense clouds of interstellar gasses. The [YSS Gosei YX-C1-0010](#), a [Tansaku-class Science Vessel](#) explored the region in [YE 32](#), and sustained heavy damage when it encountered a gravitational anomaly while deploying [survey drones](#).

Before leaving the Nebula the [YSS Gosei](#) was able to locate eight separate gravitational anomalies, further investigation is planned. Meanwhile all [Scientific Studies Service \(SSS\)](#) heading to the [Project Kyasshu](#) avoid passing through the nebula. [Second Expeditionary Fleet](#) vessels avoid passing near the known anomalies.
