

AMTC - Integrated Decontamination System

The Integrated Decontamination System (IDSP) is subcomponent of the [Autonomous Medical Treatment Center \(AMTC\)](#) and became available in [YE 31](#).

The IDS is used to decontaminate the [AMTC](#) units after they have been used to treat a patient.

The IDS cleans the following portions of the unit.

- All surface areas in the upper portion of the unit.
- Exterior of the [Medical Equipment Unit](#) and all implements used.
- The [Detachable Patient Platform](#)
- The [Integrated Atmosphere System](#)

Military and Government

For units sold to the Star Army and Yamatai government agencies. The IAS uses a version of the [Nodal System](#) not unlike the Medbays on starships. The system is limited in that the it can only breakdown organic contaminants.

Civilian

For units sold to civilian organizations and individuals the IAS uses a series of chemical disinfectants, and then the unit is wiped down to remove any chemical residue. The filters in the civilian models must be replaced when the system indicates, or at least once a year.

Replacement filters cost: 15 KS per set
