

Ke-M2-P3000 Power Armor Teleportation Unit

The P3000 is a [YE 30](#) update of the [Ke-M2-P2900 Power Armor Teleportation Unit](#) Power Armor Teleportation Unit developed by the [Star Army Research Administration's Scorpio Research Base](#). It is slightly improved and is now manufactured directly by [Ketsurui Fleet Yards](#). Development in teleportation has been slow but steady, using data gained from [Black Spiral](#) and heavy [SARA](#) testing. The Ke-M2-P3000 is able to carry more mass than its predecessor and takes less time to charge. The biggest benefit of this teleportation unit is that it is powerful enough to carry two power armors at once. *Do not allow any other factions to capture or examine this technology.*

DANGER: In atmospheric environments, causes a shockwave of heat, light, sound, and radiation. More dangerous indoors. The shockwave can rupture eardrums, caused temporary or permanent blindness and flash burns.

- Charge Cycle: Forty-five seconds to charge if the power armor is idling. Heavy use delays charging.
- Range: About 3 AU. Longer jumps could be made with the help of a starship IES and TQP-RDD.
- Maximum Mass: Can safely transport up to about 350 kg.

Mass Estimation Chart (*estimated items)						
Armor Model	Armor Mass	Average NH-29	Weaponry*	CFWEP/Field Pack*	Total	Remaining Capacity
Mindy 1F	115 kg	45 kg	10 kg	3 kg	173	about 177 kg
Mindy 1H	115 kg	45 kg	10 kg	10 kg	180	about 170 kg
Mindy 2A	100 kg	45 kg	10 kg	10 kg	165	about 175 kg

DANGER: Do not exceed mass limit, or *partial teleportation* may occur!

WARNING: These units will self-destruct if tampered with. No user-serviceable parts. Send damaged units back to Scorpio Star Fortress.
