

Zodiac-Class Star Fortress

The Zodiac-Class Star Fortresses are a type of large, mobile space station used by the [Star Army of Yamatai](#).

About the Zodiac Star Fortress

The Zodiac-class Star Fortress is a massive, long-term base of operations for ongoing Star Army activities. Its huge, bustling facilities serve as a hub for all sorts of fleet maintenance, from ship upgrades to research of new weaponry.

Unlike the Iori-class Star Fortress, most of Zodiac's facilities are external; ships under construction or repair remain outside of the station, connected by umbilical and gangways. For this reason, the Iori remains preferred for shipbuilding. It is often referred to as airport-like because of this and the moving walkways found in its spacious, diverse interior. Despite major differences in the two types of Star Fortress, they have roughly the same diameter (thirteen kilometers).

History and Background

Scorpio Research Base

Originally, the Zodiac was unique to the [Ketsurui Nebula](#); the first one was built there in [YE 27](#) as a secret research and training location by the [Star Army Research Administration](#) for the purpose of weapon, starship, and power armor research.

In the role-play, the [YSS Sakura](#) has visited it at least twice. The [YSS Miharu](#) was built there. Also, the [NH-29](#), [Ke-M2 "Mindy" Series of Power Armor](#), and other notable [KFY](#) and [KZ](#) products have originated there. The station is a stronghold for the [Nekovalkyrja](#), who make up almost all of the population there. Humans are met with suspicion and sometimes even racism.

Scorpio was the former home of [Black Spiral](#), a highly secretive sub-organization of SAINT (Star Army Intelligence), until Black Spiral became a splinter cell in early [YE 28](#). Black Spiral ships would continue to occasionally visit until [YE 29](#).

Gemini and other Fortresses

A second Zodiac-class Star Fortress, Gemini, was constructed near Hanako's World in [YE 29](#). It serves as the headquarters of the [First Expeditionary Fleet](#). The [YSS Sakura](#) docked there briefly before heading out in search of the mysterious "Dark Ones." It occupies a key position, providing overwatch to Sakura's Gap, the main opening between the SMN/YSE space barrier.

Other Fortresses

Since then, more fortresses of this class have been built they include:

- [Scorpio Star Fortress](#), ([Ketsurui Nebula](#))
- [Gemini](#), ([Jiyuu System](#))
- [Pisces](#), ([Yamatai](#))
- [Sagittarius](#), ([Xyainbor](#)) - Destroyed
- [Virgo](#) ([Samurai Sector](#))
- [Aries Star Fortress](#), ([Nataria](#)) - Destroyed
- [Aquarius Star Fortress](#), [Koukotsu System](#)
- [Capricorn](#), [Shurista](#)
- [Cosmos Star Fortress](#) - Destroyed
- [Libra](#), [Saiki Cluster](#) ([Daichi](#))
- [Leo](#), [Tenth Fleet](#)
- [Taurus](#), [Bard Cluster](#) ([Tsuyosa](#))
- [Akarui Star Fortress](#), [Valentine](#)
- [Cancer Star Fortress](#), [Great Southern Nebula](#) - Destroyed

Dimensions and Crew Complement

- Type: Mobile Space Station and Shipyard
- Class: Ke-H2 Series
- Designer: Star Army Research Administration
- Manufacturer: Star Army Research Administration
- Production: Limited
- Crew: ????
- Maximum Capacity: ????
- Appearance: The snowflake-like station has vast white body that dwarves the starships around it; there are hundreds of docking ports each of the huge arms; dozens of various spacecraft in various stages of completion are usually attached to them.
- Diameter: 13 kilometers. Each individual arm is 5,250 meters long and the core is 2,500 meters wide.
- Height: 1,500m
- Decks: spaced 4m apart
 - Core: 375 decks
 - Six Arms: 90 decks
- Mass: Enormous

Performance Statistics

- Speed (FTL): Category 2. See: [Star Army of Yamatai Starship Speeds](#)
- Range: Effectively unlimited, although food quality and quantity may be limited when it must support itself.
- Lifespan: Estimated 500 years or more
- Refit Cycle: About once a year, the station undergoes upgrades while still in service, usually one arm at a time.

Damage Capacity

See [Damage Rating \(Version 3\)](#) for an explanation of the damage system.

- Hull: 300 (Massive armored space station)
- Shields: 300 (Threshold 5)

Inside the Zodiac Star Fortress

Part of this section is divided into two subsections, one for the station's hexagonal core, and another for the station's arms.

Passageways

Standard passageways throughout the station are wide, well-lit corridors with slightly angled white plastic walls that are wider near the ceiling. The floors are usually covered in a thin gray carpet. Black emergency indicator strips that run lengthwise will blink red in the event of a battle alert. Central corridors can be exceptionally wide and if they are long, a moving walkway may run in each direction along the centerline to hasten travel. All corridors are equipped with emergency blast shutter systems to section off dangers such as enemies, fires, and hull breaches.

The Core

- Due to its size and population the Zodiac features a [Star Army Standard Hospital Center](#). Care en-route to the Hospital Center is provided by [Emergency Services](#) personnel.

Command Center

Each Zodiac features a [Star Fortress Command Center](#) customized to its unique needs.

Engineering

Description Pending

The Six Arms

Each arm contains two concourse levels (upper and lower) with 20 docking stations on each side of each and one dock at the end (usually for the largest ships) for a total of 42 docking stations per arm and 252 per star fortress. Docking stations are evenly spaced at 250m intervals.

Cargo Movement Levels

Immediately beneath the concourse levels, these decks contain a system of conveyor belts and robotic arms that process materials going to and from ships, making loading a fast and efficient process. The cargo movement levels span 4 decks and have eight tracks (two per side on on two levels, each going opposite directions) which carry flatbed cars onto which cargo is loaded.

Concourse Levels

Concourse levels, one upper and one lower, make up the main transportation centers of the station. Their centers contain moving walkways and a carpeted hallway 24 meters across. The walkways are lined with various shops, offices, and restaurants that are run by permanent military residents, typically starship engineers, intelligence officers, and power armor pilots whose jobs are not taking up much time for whatever reason. Shops generally connect to living quarters located above them, where their owners live (and sometimes, work). Running behind the shops is the [Zodiac Light Rail System](#), a fast mass-transit system accessible by stations located every kilometer along the arm's length. The [ZLRS](#) trains run through the station's main body and can be used to ride to other concourses. The concourse levels are almost always full of activity; at any given point, dozens of Nekovalkyrja girls will be going about their business.

Crew Quarters

Each suite is a two room arrangement; it contains a workroom/living room combination at the entrance, with a door leading to a bathroom to the side and a passage beyond leading to the bedroom.

Docking Stations

Description Pending

Mecha Bays

Description Pending

Power Armor Training Facilities

The station boasts a number of exceptional power armor training facilities. These areas usually contain a small reception and waiting area, a large simulator room, a restroom, and a classroom.

Starship Production Areas

These centers, located near the docking stations, are where the fabrication and pre-assembly of various starship components take place. In addition to extensive workshops and synthesis units, the production areas feature large bays that open out into space. Generally the areas are filled with stacks of starship framing beams, armored hull sections, and various components. The starship production centers usually take up six decks, with the middle level containing the assembly bay. The lower levels contain the fabrication for frames and hulls, while the upper levels are used for storage of interior parts such as

paneling and carpeting.

Station Systems

Hull

This ship's armor is composed of interlaced [Yamataium](#) with a high content of [Zesuaium](#). It features many airlocks, windows, and enough escape pods for most of the crew.

Combined Field System

The Zodiac has an exceptionally powerful shield system, designed to protect against anti-fleet area weapons as well as minimizing damage done by direct single-target main cannons. Focusing power on defense takes away from the Zodiac's ability to move (and vice versa). The Zodiac's shields protect any ships docked to it or within 2km of its surface. On a scale of 1 to 10, the Zodiac's shields rank as a 10.

The Zodiac can effectively disrupt FTL travel from up to 10 light-years away.

See: [Combined Field System](#) and [Anti-FTL Field](#).

Environmental Systems

Uses [Star Army Standard Life Support Systems](#) capable of supporting up to 5 million people.

Sensor and Computer Systems

Uses [PANTHEON IES](#) and is equipped with a [Psionic Signal Controller](#).

Weapons:

Remote Aether Shock Arrays (6)

Range of 10 LY. Instant. [DR 5](#) (Anti-Starship).

Aether Shock Arrays (24)

4 at the end of each arm. Equivalent to [Plumeria's main cannon](#).

Weapons Pods (6000)

The latest and greatest [Star Army Weapons Pods](#).

Vehicle Complement

- [Nozomi-class Scout](#) (24)
- Mindy M2 Anti-Starship Power Armor
- Sylph M4-2 Space Combat Armor
- [Kuma T8 Medivac Shuttles](#)

OOC Notes

Star Army Logistics	
Supply Classification	Class A - STARSHIPS
Products & Items Database	
Product Categories	starships
Product Name	Zodiac-Class Star Fortress
Nomenclature	Ke-H2
Manufacturer	Star Army Research Administration

Products & Items Database

Year Released	YE 29
