

Ke-V8-W4201 - Nashi (None Shall Pass)

This system is designed to prevent an enemy from being able to move ground forces through a territory.

History

The Nashi or *None Shall Pass* were developed in [YE 42](#) as part of the [Ke-V8 "Super Kawarime" Fighter](#) project.

Details About None shall pass

The Nashi is a system that renders an area unsafe for ground forces to move through. It consists of bomblets that are loaded with [Gravity Reactive Plastic Explosive](#) top is filled with this explosive. When an enemy approaches the bomblets. The bomblets are designed to bounce 1.5 meters when a target approaches. It then detonates with the force moving parallel to the ground. Because of the number of bomblets deployed, multiple ones will trigger. Thus creating a devastating result.

There are motion sensors on each of the 'legs'. The image shows the location. The sensors do not actually glow when deployed. The motion sensors have a range of 10 meters. They will detonate based on the programming. Minimum range would be 4 meters. Maximum range would be 10 meters.

The bomblets are launched by the rack system. They are programmed when launched to land in a specific pattern. They then wait until a target gets detected.

Statistics

Damage Rating (Version 3)

- Tier 4 Light Armor (Per unit)

Dimensions

- Length: 7.62 centimeters (3 inches)
- Height: 10.16 centimeters (4 inches)
- Width: 7.62 centimeters (3 inches)
