

Bio memetic ink

WIP: This article is a work in progress and is not yet approved for usage in the RP.

Bio-memetic ink is an organic application of meta-inks which can be assigned to fabrics, hair and even skin to create a form of disposable programmable surface which can display any image or effect required.

Commonly, bio memetic ink is programmed with 'applicator' devices which resemble brushes, creating an authentic 'painting' experience. In this way, the first time the ink is applied, a profile can be assigned from a painted pattern. Afterward, a layer only needs to be applied and it will automatically organize itself to copy whatever visual pattern it has been told to from memory.
