

Volulon discreet protection suit

WIP: This article is a work in progress and is not yet approved for usage in the RP.

Simply put, the VDPS protects its user from kinetic, chemical, biological, radeological and compression threats, though only in its ACTIVE configuration. In its PASSIVE mode, the VDPS appears as a normal element of clothing even under scrutiny and as with volulon, can be programmed. This is ideal if a user does not wish to display a failure of confidence in one's hosts or alarm those around them with suspicious equipment - though this functionality comes at an incredible cost.

Commonly, it is distributed to Lazarus operatives in the field.

Lazarus fielded the Volulon Discreet Protection Suit in [YE 35](#). It retails for 135,999KS.

More about the Volulon Discreet Protection Suit

A military grade evolution of [volulon](#), the Volulon Discreet Protection Suit (VDPS) protects from kinetic, chemical, biological, radeological or atmospheric conditions which pose a threat to the user.

Under normal circumstances, the complete unit appears as a specific element of attire - usually a heavy coat with the legs, gloves and helmet tucked away - which passes as whatever it is chosen to be under scrutiny. In this mode, the VDPS offers little to no protection at all, beyond absorbing kinetic strikes (such as those of a bullet) by distributing it across the whole surface of the coat. Important is that while the material is very heavy for a coat, because it sits over the user's body, the weight is distributed and hence it is quite easy to wear.

In Active-Mode, the legs tucked up inside the back of the suit tuck down, enveloping the users' legs and feet - gloves inside the cuffs cover the user's hands and the hood slips down and seals over the neck and face, producing a face-plate. In this mode, the suit is much less dense - with a "crunchy" nano-material exterior designed to ablate when struck - with muscular weave beneath.

Functionality

In active mode, the suit provides the aforementioned protection. In addition, the faceplate contains a basic HUD system as well as system networking and basic strength augmentation and motor-function filters and a compression system for wounds to prevent bleed-out - allowing a user with injuries to walk and move normally.

Stasis Mode

The suit can also harden into a Sarcophagus of sorts and enter a stasis mode, containing a complete Lazarus Stasis unit, as well as an SS beacon - allowing for long-term preservation of the user for retrieval.
