Dusk

The 2nd of two AI's designed by Galactic Horizon in order to assist them with various other projects and enhance their future design capabilities.

About Dusk

The second AI designed by Galactic Horizon as the "younger brother" to their first AI Dawn and as a digital compliment to the AI set. The Dusk system takes commands and ideas and controls groups of autonomous or remote units in various situations both civilian and military. The AI requires regular maintenance to ensure it remains compatible with whatever it interacts with and is able to interpret and decode orders and recommendations from either its "older sister" or alternate source.

Statistical information

Statistical information regarding the Dusk AI including who designed it, its year of creation and current version.

Organisation: Galactic Horizon Designer: Galactic Horizon Manufacturer: Galactic Horizon **Classification:** Unit control **YE Created:** YE 40 **Current Version:** Dusk v0.3.4

Function

While the previous system was designed with the intent to act as an advisor and tactical analysis Dusk was created to act in assistance to the original. By taking the information and recommendations developed by Dawn and other sources and acting on them via wireless command of its assigned units, Dusk is able to efficiently and quickly mobilize large groups of autonomous units as well as dispatch orders to manned vehicles and infantry with processing times as little as a millisecond.

Key features

Dusk being designed to compliment Dawn acts as the part II to the AI duo, its key feature is the ability to control an indiscriminate number of automated units at any one time. The ability to make decisions is purely based on the supplied information from its assigned source, the strategies and tactics used are constantly updated by the success and failure of each decision made to become more efficient.

History

Designed and coded in YE 40 several months after its predecessor Dawn as the actioning force of the two. Its design and approval were overseen by Riccard Black being careful to ensure it was made to a high standard with as little bugs and flaws in its operation as possible.

Dusk v0.1.2 was completed and uploaded into the Galactic Horizon local network for testing within their own devices, this initial test phase went according to plan with various command interpretation and execution issues found and solved. Dusk v0.3.4 was the result of this resolution and is the current OS version used in the HQ.
