HiGa MX-02 "Gallina"

The Gallina was originally designed by Divolis Corporation, and was briefly used in a corporate war against HiGa. after HiGa won the corporate war, however, the design was taken and adopted by HiGa corp, where it was lightly upgraded and pressed into service as a security unit. The Gallina is very cheap and easy to produce, but aside from that, it's not really good at much.

Features

- Stands about 6 meters tall.
- Shields: 10
- Structure: 18
- 4x side-mounted light rail bazookas (Tier 5 or Tier 6, Medium Anti-Armor or Heavy Anti-Armor (⚒ Fix Me! : Staff needs to determine which)) single-shot
- 1x 200mm cannon (Tier 7 or Tier 8, Light Anti-Mecha or Medium Anti-Mecha (⚒ Fix Me! : Staff needs to determine which)) 10 RPM, 100 rounds
- Walks at about 15 MPH

Computers/electronics

The Gallina's computers aren't exactly what one would call 'smart' they have just enough computing power to keep the Gallina upright and walking, and to help it run sensors and some basic targeting control. The unit seems to wobble a bit when the main cannon fires, especially if it is off-center, which is probably due to a problem in the computer calibrations.

Propulsion

The Gallina is propelled entirely by its legs. As a walking tank, it is relatively simple for a frame, and is simply powered by hydraulics which are run off of a battery-powered electric motor/pump.
