

Baby Torpedoes

Designed in [YE 31](#), Baby torpedoes are heavier weapons for smaller craft.

Tiny torpedoes made to be the perfect fit for anti-starfighter work, Baby torpedoes are long-range light duty torpedoes specialized for anti-starfighter work, but also capable being used effectively against Starship weapons platforms. [Origin Defense Manufacturing](#) designed these torpedoes to give lighter starfighters a heavier-hitting capability than they would normally possess, allowing them to compete with larger, more robust fighters. Baby torpedoes use a modified, miniaturized, mass-production CDD to travel faster than the speed of light.

The baby Torpedo is a two meter long, .55 meter diameter tube with a tapered front end, and a rounded back end. On top there is a small bracket system to allow them to be attached to medium-duty hardpoints, which detaches from the torpedo upon firing.

Ammunition	DR(A)	Description	Price
Nuclear fusion	5	A small fusion warhead, equal to a few kilotons of TNT	1,400 KS
Antimatter	5	A small antimatter warhead, which allows for damage against Zesuaium-clad targets.	1,700 KS

Weapon Specifications

- Nomenclature: OI-Z4-1A
- **Purpose:** Anti starfighter, Anti gun emplacement
- **STL**
 - Range: 100,000 km or less
 - Speed: .5 c
- **FTL**
 - Range greater than 100,000 km to 1 AU
 - Speed: 10c
- Payload one

Products & Items Database	
Product Categories	weapons: torpedoes
Product Name	Baby Torpedos
Nomenclature	OI-Z4-1A
Manufacturer	Origin Industries
Year Released	YE 31
