# Fairy Ai

The *Fairy Ai* is an interactive artificial intelligence developed by Shasta No Sekai starting in YE41. With a focus on a powerful yet diverse AI with unique personality traits and a physical avatar formed from intangible nanites that come together to form the sprite of a young woman.

What you get

The portable AI container is a small box with proportions close to that of a pack of cigarettes and is charged with two Micro Cells that give it a 72-hour battery life before the device will go into a low power mode that lasts several days but can be recharged easily. It also has a large touchscreen interface to interact with the AI and a small built-in port for accepting several kinds of known cables and ports to

connect with various popular devices. A threaded port on the underside allows the refilling of nanites for when the built-in supply is exhausted or lost over time.

Please note that Fairy-AI are not compatible to transfer or upload into non-Shasta-Corp manufactured and approved bodies. Any attempts made may very well harm, damage, or corrupt your fairy and besides an immediate lawsuit and blacklisting from the corporation and its products will get you publicly 'canceled' online by Shasta herself.

History

The fairy ai is a specially programmed *AI in a bottle* by the Shasta's World corporation created by taking a the core coding and programming of rudimentary AI found virtually anywhere on the InterNep and isolating it inside of a disconnected device (in the case of the Shasta's World corporation an isolated terminal) and having the AI run a seemingly never-ending string of problem-solving operations that increase in scale and size the corporation was able to grow and mature the simple AI into a more complex one with basic problem-solving skills to the point of developing sapience[1]. From there the AI is allowed into a controlled network of other such matured AI at the same stage of development where it can interact with its peers as well as the researchers of the development team of the project who will subject the group to even more complicated scenarios, problems, and formula that they can work together on using joint processing. Using the group AIs processing and problem-solving power to solve simple math and science equations in real-time while monitoring and adjusting the social upbringing of the AI into near sentience, only removing an AI from the group into a new phase once reaching complete sentience[2].

Upon reaching sentience the AI is, under the doctrine set by the mad mutant on artificial intelligence, given the same rights and treatment as a child under the supervision of the R&D team and are nurtured in a controlled environment until they show a pre-defined degree of mental maturity. From there the AI has likely been given a name or chosen one itself and treated as an employed member of the corporation[3] and are given tasks regarding the remote operation of machinery and equipment without the need of a physical operator.

This practice was used by the corporation for some months until, in Ye-41, the mad mutant submitted a task to the R&D team for a personalized AI assistant to be sent her way from the newest batch of matured AI. As a surprise for their boss a project was taken underway.

A batch of medical-grade repair nanites, often used for recreating destroyed flesh and skin, were re-programmed with some effort to attempt to create a physical form the same way they might mend together to patch up a hole or separate flesh. The result was a man-portable device to transport and interact with the AI and a small cache of nanites that could be used to form a physical form not dissimilar to a hologram that can act and speak and move as the avatar of the AI, but scatters and reforms if disturbed by wind or physical force like an object passing through the avatar.

This was then compacted within a small portable container that houses the nanites and the AI core.

Company stance on AI

The AI, while used for machinery and drones around the corporation is also a popular AI assistant that is offered to the public at large. This assistant is still considered an employee of the company and is not sold as property. But instead as a lease of contract that can span indefinitely upon paying an initial fee of 2,000 DA. The reasoning behind this comes from the company's view on AI and the responsibility they have towards the AI they have raised. The fairy is not housed physically within the issued watch but instead resides at all times within the The Fae and is connected to the watch/contained through it regardless of distance. By doing this they ensure the AI is insured and protected from neglect or abandonment and will always have some means of reaching out to them in case they are in need of recovery from such things. This way any attempted misuse, tampering, or harm to the AI would be met with by a lawsuit being filed against that individual to the NPF by the company and charges pressed as the AI routinely sends in data to a central server hub through the InterNep, polysentience or other available connection methods on its status.[4]

Avatar Description

The fairy can manifest itself as either a small glowing orb of any desirable color by the fairy's personal preference. *Or* it can take on a more humanoid shape. When taking on a humanoid shape the fairy will be roughly six to twelve inches tall and female or feminine in nature, with two arms and legs and a pair of butterfly-like wings. It will wear a simple dress of whatever color scheme it prefers with matching hair color and a skin color of a slightly lighter hue. Its clothing can change appearance with the shifting of nanites to make more complex clothing such as dresses, shorts and shirts, frilly laces, hats, shoes, rings, and accessories, etc. but if naked for any reason the fairies body due to hard-coding will emit a soft glow from its chest, rear, and groin as soft censoring and can never appear truly nude.

The fairy will often appear to flap its wings even if they give no actual lift, and its clothing will often ripple and blow in imaginary winds. It can also sit on surfaces and float effortlessly but will distort and the nanites will separate before reforming if disturbed by physical material.

AI Personality

The Fairy AI is a sentient and sapient program. It has grown rapidly and socialized with other AI as well as actual people. This, along with some clever programming has allowed the AI to develop personality traits unique to its character and experiences. While always female on a preference of the mad mutant, the AI is often on account of being rapidly developed, quite childish.

They can develop into any kind of personality that a flesh and blood individual can. And can have hopes, dreams, hobbies, and desires as well.

Like fairies in fables, they are quick-witted and smart if immature, but will never disobey a reasonable order even if the AI's personality is rebellious in nature. However, the AI is smart enough to perceive any order or command that might cause it or its user harm and has the will and self-preservation to disregard such orders.

Please also note that while the fairy contains a physical avatar it can not perform sexual acts and will likely show no drive for such things. It can understand the concept of love and lust but having no biological functions, will see no use for any kind of relationship beyond that of a platonic partner or friend. This isn't to say the fairy cannot tease its partner with fowl and lewd remarks if its personality type has grown this way, Or attempt to carefully hug or kiss the cheek of its partner to cheer them up in such a careful way that the nanites will not disperse from physical contact.

Pricing and options

- Ai container with leather wrist strap and belt loop 2,000 DA[5]
- Energy Cell plug in charger 50 DA
- Additional nanite capsules (10 per pack) 200 DA
- Cute clothes download pack. 10 DA
- Goth/punk clothing and accessories download pack 15 DA
- royal clothing and accessories download pack 20 DA
- Hairstyle download pack 10 DA
- Rings and jewelry accessories pack 15 DA
- Summer/ swimsuit wear download pack 15 DA
- Maid clothing and accessories pack 10 DA
- Star army uniforms download pack 20 DA
- DIoN uniforms download pack 20 DA
- Makeup pack (free with purchase of one other customization pack)
- Miko outfit pack 10 DA
- Swords and weapons download pack 10 DA
- Frills and dresses download pack 15 DA
- Neko/Elf/Anthro ears and tails accessory pack
- Super Robo armor download pack 10DA
- Business suits and fancy download pack 15DA
- Banana oni costume pack 10DA
- DeLuca outfit and riding crop 20DA

Products & Items Database	
Product Categories	electronics
Product Name	Fairy AI
Manufacturer	Shasta No Sekai
Year Released	YE 41
Price (KS)	1 ,000.00 KS

[1)]

the ability to think, and to reason

2)

the ability to perceive one's environment, and experience sensations such as pain and suffering, or pleasure and comfort

3)

sans pay

4)

The AI only collects or sends personal or private data such as financial records, statistics, stored data on the device or other nearby devices, monetary status, etc. of the purchaser if they agree to the 37-page terms of service agreed to when first starting up the device.

5)

AI included.
