

Adrast Type Heavy Torpedo

The Adrast Type Heavy Torpedo is the 'main' or at least most powerful weapon on the [adrast](#), designed to be capable of inflicting serious damage to ships of even the capital class in order to aid the defence of the Elysian systems. To this end the Torpedo launcher, which is central to the ship, fires a 6m (19.6 ft) long, 1m (3.2 ft), equipped with a SDG propulsion unit, rocket, shield, guidance computer and a two stage explosive. The two stage explosion functions by triggering a sub-space detonation, using the same principal as the Ke-M2-W2907-SDMM and AS-7-1-SDM which shuts down shields and FTL drives in the immediate area at which point the torpedo activates its rockets to propel it through where the shields would be before detonating with a 1 gigatonne explosion (from a 20 kg anti-warhead).

Primary Purpose: Anti-Starship Secondary Purpose: Anti-Planet Damage: Tiers 13 through 15, Light Anti-

Capital Ship through Heavy Anti-Capital Ship (: Staff needs to determine which)
Blast Radius: ~50 kilometres Speed: 14c (3.5c in a level 3 anti-FTL field, 0.5c inside an interdiction field)
Range: 126,000,000 km (7 light minutes)
