

Jodau Fiqorka (Module Brain)

The Jodau Fiqorka *Module Brain* is a limited non-sentient AI used by the [Poku Saeruo Degonjo](#) the current model came into use in 724CY ([YE 15](#)).

About the Jodau Fiqorka

The Jodau Fiqorka is a less powerful version of the [Jodau Sumanâjo \(Synthetic Brain\)](#). They are designed to handle specific tasks and handle them very well. They are not as flexible as the [Jodau Sumanâjo](#). They are incapable of becoming self-aware.

The brain has an independent [emergency power system](#) capable of operating it for several days. Jodau Fiqorka are fully fluent in [Taka Norjopa \(Machine Speech\)](#), and can control any [Poku'vonai](#) device that they can interface with it.

Only a qualified [Jodau Bajao'a \(Brain Technician\)](#) should work on this equipment.

Purpose

A Module Brain are used on equipment that are unmanned, or as part of the control infrastructure of larger equipment. For example a Module Brain can be installed in the power generators of a starship, or the life support of a station. Any place that autonomy is needed.

History

The Module Brain was created after the clan arrived at their new home. They went into production in 26 CY YE -693 as one of the first developments of the [Poku Movi Vamâqi \(Clan Void Berth\)](#). They were needed because there were times without sufficient trained personnel. The Module Brain replaced the manual computer systems that were common before the [Norka \(The Exodus\)](#).
