

Iasa Vakâme (Anesthesia)

Vakâme was developed by the [Otâmovi Wiy Jael \(Silver Moon Sect\)](#) for use by members of the [Poku Saeruo Degonjo](#) in 739 CY [YE 21](#). Typically found in medical kits. It is intended to render the patient unconscious for medical treatment. It is not a sleep aid.

The drugs effectiveness is a ratio of medicine to body mass.

Note: Use of Vakâme in liquid form is restricted to trained personnel, no more than two ampules should be used. Vakâme comes in prepackaged auto-injector ampules. One ampule is sufficient for a 100 kg patient.

It takes approximately four hours for the body to metabolize the drug and the patient to return to consciousness.
