

# Iasa Mygous (Stimulant)

The Iasa Mygous was developed by the [Otâmovi Wiy Jael \(Silver Moon Sect\)](#) for use by members of the [Poku Saeruo Degonjo](#) in 739 CY [YE 21](#). Typically found in medical kits. It comes in two forms pills and liquid. The active chemical is a synthetic form of the [Poku'vonai](#) 🧠 [Epinephrine](#).

The drug's effectiveness is a ratio of medicine to body mass.

Note: Prolonged use of Iasa Mygous can cause severe side effects. Specifically cardiovascular damage.

Note: Use of Iasa Mygous in liquid form is restricted to trained personnel, no more than two ampules should be used. Iasa Mygous comes in prepackaged auto-injector ampules. One ampule is sufficient for a 100 kg patient.

## Uses

Iasa Mygous usage depends on the form that is used.

## Pills

The pill form contains the same drug as the liquid, but it is in a slow release format and not as strong. It is used by persons who need to be alert after being awake for extended periods. One dose (two pills) will help the person stay alert for four hours. No more than four pills should be taken in a saenor (day).

## Liquid

The liquid form is only used in emergency situations, such as cardiac arrest, serious allergic reaction, or some respiratory conditions.
