

Ikâme (Floor)

Ikâmei *floors* on [Poku Saeruo Degonjo](#) ships are made of sheets of [Mâqitua \(Light Metal\)](#) laid over a framework of [Mâqirây \(Bound Metal\)](#). They are then covered on top by a variety of flooring. The bottom of the floor in most cases is the ceiling for the deck above.

They are 1.25 meters thick which allows for the installation of equipment such as [Udano Norjopa \(Gravity System\)](#) and on-demand hot water units. Also making their way through the floors are the various [Lekaokâur \(Crawl way\)](#) which allow [Bajao'a \(Technician\)](#) to access equipment that is installed in the non-accessible areas.
