

Damira Ikâ (Ground Environmental)

This page provides the information for the standard environmental system used in [Poku Saeruo Degonjo](#) ground applications. It went into use in [755 CY \(YE 36\)](#).

Basic system

The system filters the air for contaminants, and heats or cools according to occupant preferences. It is intended for use in a habitable atmosphere. The filters have to be changed once a year, otherwise as long as the vehicle has power it will operate.

Environmental Expansion

This accessory can be added to the vehicle. It consists of a container of breathable air sufficient for twenty four hours. This is typically used when the craft is used on airless worlds or toxic environments.
