# Gianaka Gean (Fuel Cells)

The Poku Saeruo Degonjo have been using Fuel Cells since prior to their arrival in the Kikyo sector in YE -719.

## **About Fuel Cells**

The clan use high efficiency hydrogen a Fuel Cells. These are arranged in a combination of series and parallel cells to produce a more useful power output. The power is then routed into an a voltage inverter to convert it from direct current to alternating current. This allows the output to be integrated into the vehicles primary power system.

Typical installations are in a sealed module with a local fuel supply attached.

### **Applications**

#### **Emergency Power**

These power cells serve two purposes on ships. In the event of a failure of the main generators they can provide power to vital systems; life support, communications.

They are also used to supply power when a ship has to cold start and external power is not available.

#### **Electrical Vehicles**

This is the normal power supply for short range electrical vehicles. Typically used on the Sotaka Ruomagi (World Station).

#### Droids

These power cells are used to operate the various minor droids the clan use for maintenance.
