

Electric Motor

A much cleaner system than the internal combustion engine, the [electric motor](#) was the next step in engines for ground vehicles. It comes fully equipped to provide the necessary horsepower depending on the vehicle by using different waste energy recovery methods. The amount of power depends on which vehicle classification it is used in as the motor is built accordingly. Typically they are powered by either conventional fuel cells, or a [Huelmu Supercapacitor](#).

General Information

Name: Electric Motor Type: Ground-Based Vehicle Engine Government: [Sahaad Confederacy](#) Designer: [Djahet Fleetforges](#) Manufacturer: [Djahet Fleetforges](#)
